Fusion Fuckery Rulebook v4.7

Reality is ~~FUCKED~~ fractured.

A massive multiversal collapse kicked off by a bunch of Reactor Meltdowns turned reality into total chaos. Angels and Blood Demons are real now. Goblins are stealing my fucking gold and some fuck ass dinosaurs strolled out of the past, and for some reason Gregg and his extended family are here too... What the fuck, Gregg?

1. The Golden Rules

When anything in this book seems to clash, these three settle it.

1. **The card wins.** If a card's text contradicts this rulebook, do what the card says.
2. **Your cards, your job.** You remember and trigger your own cards' effects (section 16).
3. **Newest first.** When effects pile up, the last one played resolves first (section 11).

2. How to win

Each player starts with **30 PHP** (Player Health Points). Get your opponent to **0 PHP** and you win.

Your PHP drops when:

- an enemy creature hits you directly (section 13)
- a card effect deals you damage or makes you lose PHP
- you pay PHP for your own cards. You can pay yourself to 0, and then you lose. Count carefully.
- you can't draw. Running out of cards doesn't knock you out: each time you'd draw from an empty deck, you lose 5 PHP instead.

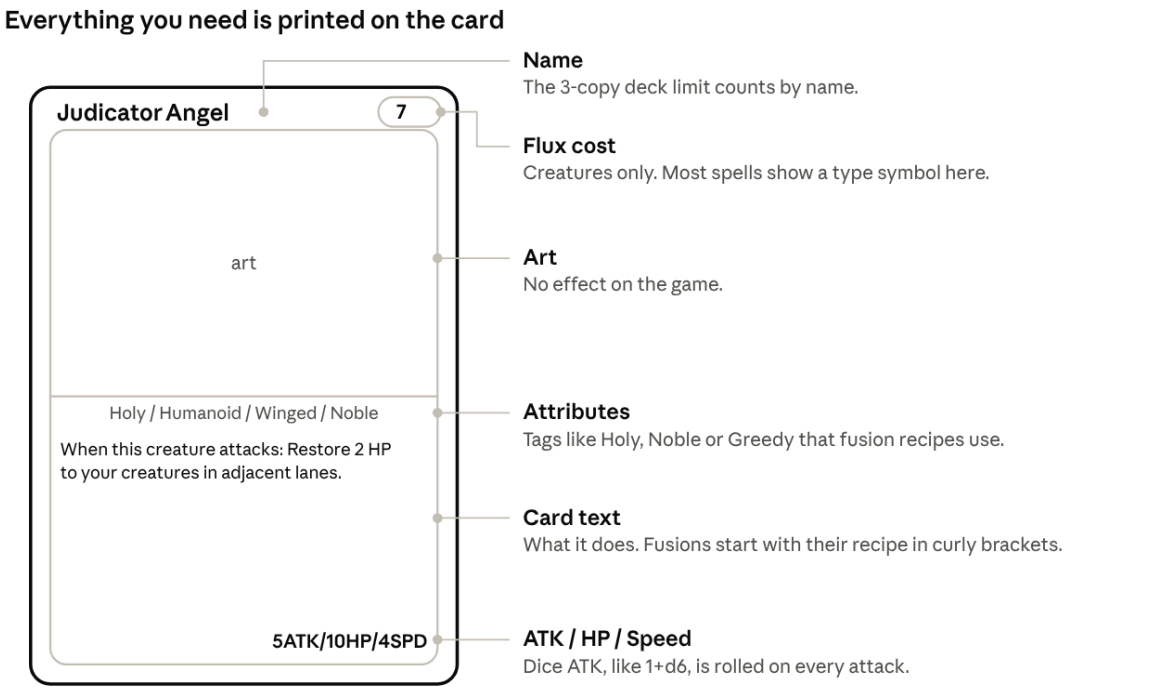

If both players hit 0 PHP at the same time, the game is a draw.

3. What you need

- A **Main Deck** of exactly 30 cards and a **Fusion Deck** of up to 10 fusions.
- **Dice.** Dice ATK uses a d2 (a coin works), d4, d6, d8, d10, d12 and d20. Spare dice help track damage.
- Your own **coin** for coin flips.
- Something both players can see to track **PHP, Gold and damage** on creatures: dice, paper or a phone.

4. Reading a card

Every card is a tiny contract with reality. The frame colour tells you what it is, so cards don't print their type.

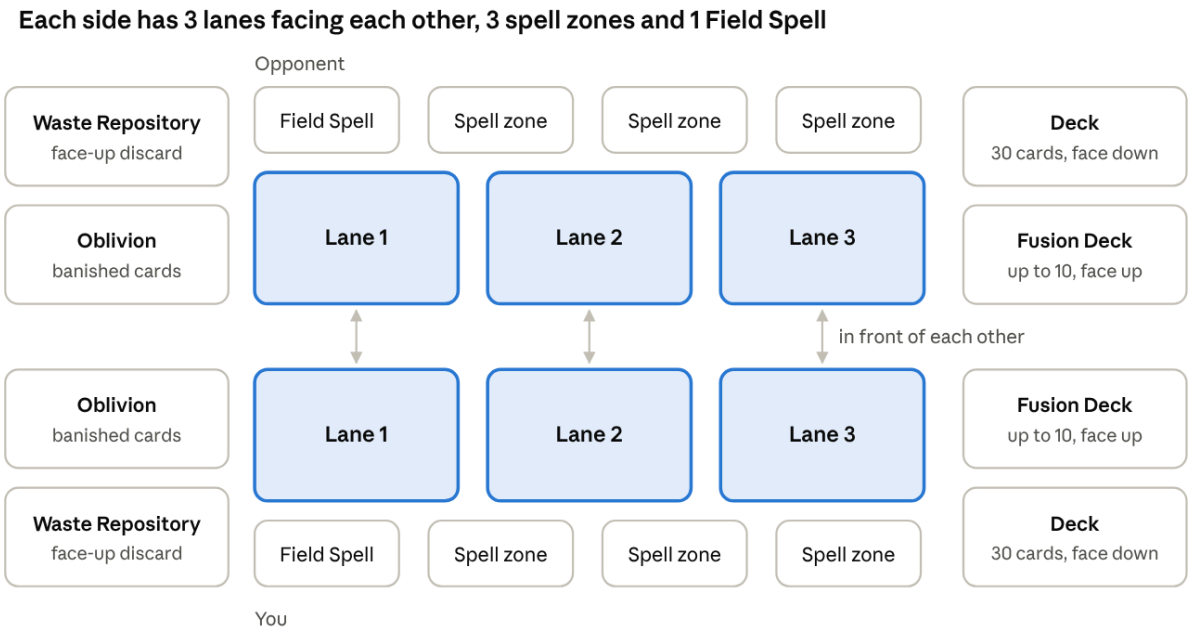

A creature card: 6 parts

- **Creatures (orange)** show their flux cost in the DNA badge, top right. A **gold** badge means it costs 5 or more flux, so it can be used to fuse (section 14).
- **Fusions (cyan)** have no flux cost. They come from your Fusion Deck, and their text starts with the recipe in curly brackets, like {Chapel Guard + any Holy creature}.
- **Spells (purple)** have no stats. A symbol top right shows the spell type; a normal Spell has none (section 11).

5. The play area

Your side mirrors your opponent's, and your 3 lanes line up with theirs.

The table: both sides

Zone	What it is
Lanes (3)	Your creature zone. One creature or fusion per lane, so max 3.
Spell zones (3)	Every Spell and Instant is played into an empty spell zone, then leaves when it resolves. Continuous Spells stay. All 3 full = no more spells until one clears.
Field Spell zone (1)	Your Field Spell. 1 per player.
Deck	Your 30-card Main Deck, face down.
Fusion Deck	Your fusions, face up. Anyone can look through it.
Waste Repository	Your face-up discard pile. Used, destroyed and discarded cards go here.
Oblivion	Face up. Banished cards and cards fed to the reactor go here and never come back unless a card says so.

Hidden and public. Your hand and your deck are hidden; everything else is public. Hand size is public too: if your opponent asks how many cards you hold, tell them. Ask before touching the other player's cards.

Where things are.

- **In front of:** the enemy creature in the same lane, directly across.
- **Lanes next to it:** the lane or lanes directly left and right. The middle lane has two; the outer lanes have one. Lanes 1 and 3 aren't next to each other.

6. Building a deck

- **Main Deck:** exactly 30 cards (creatures and spells).
- **Fusion Deck:** up to 10 fusions. Fusions only go here and don't count toward the 30.
- **Copies:** max 3 of any card by name, in both decks.
- **Mixing:** any card can go in any deck.

7. Setting up

1. Shuffle your Main Deck and offer it to your opponent to cut.
2. Put your Fusion Deck face up next to your field.
3. Both players start at 30 PHP and 0 Gold.
4. Flip a coin. The winner decides who goes first.
5. Each player draws 5 cards.
6. **Free redraw:** if your opening hand has 0 or 1 creatures, you may show it, shuffle it back into your deck and draw 5 new cards. Once per game, and you keep the new hand.
7. **Mulligan:** only if both players agree. Then both shuffle their hands back into their decks and draw 5 new cards, once.
8. Start the game.

Going first vs second. The first player skips their first draw and nobody attacks on the first turn of the game. The second player gets +1 flux on their first turn (4 instead of 3).

8. Flux

Flux is what you spend to materialize and fuse creatures. Spells are free.

- You start the game with **3 max flux**.
- In your Reactor Phase, except on your first turn, raise your max flux by 1, then refill it.
- **Feed the reactor (optional):** send 1 card from your hand to Oblivion for +1 flux this turn. Your max flux doesn't change: at 7/7 you feed and have 8/7, and next turn you go to 8/8 as normal. You can feed on your first turn too.
- **Skip (optional, instead of feeding):** don't raise your max flux this turn (you still refill) and draw 1 extra card. Not on your first turn; you can skip at 10 max flux too. Your normal draw always happens, whatever you choose.
- Max flux caps at **10**, on your 8th turn if you never skip.
- Leftover flux doesn't do much: your next Reactor Phase refills you to your max anyway.
- Turns are counted per player: your 3rd turn is the third turn you've taken, no matter who went first.
- A discount can push a cost below 0, and then you gain the difference: a creature that costs -1 flux gives you 1 flux when you play it.

Your turn	1	2	3	4	5	6	7	8+
Max flux	3 (4 if second)	4	5	6	7	8	9	10

9. Turn structure

Seven phases, in this order, every turn. Say each one out loud as you go.

#	Phase	What happens
1	Draw	Draw 1 card. The first player skips this on their first turn.
2	Reactor	Max flux +1 (not on your first turn), then refill your flux. You may also Feed (a card from your hand to Oblivion: +1 flux this turn) or Skip (no +1 max flux, draw 1 extra card).

#	Phase	What happens
3	Start	Radiance bonuses from your last turn end, then resolve start-of-turn effects.
4	Main 1	In any order: materialize creatures, play spells, use effects. One fusion (section 14).
5	Battle	Attack (section 13). Nobody attacks on the first turn of the game, and creatures that arrived this turn can't attack.
6	Main 2	Play spells and use effects. No materializing from your hand and no fusing.
7	End	End-of-turn effects, then discard down to 8 cards.

10. Materializing creatures

From your hand (natural materialize). Only in Main Phase 1. Pay the creature's flux cost, then put it in any empty lane. You can materialize as many as you can pay for and fit. Some creatures let you pay PHP to reduce their flux cost (Blood Price, section 15).

By an effect (Carrion The Dark Duchess, Lord Lazarus and so on). It happens whenever the effect says, even outside Main Phase 1, and you don't pay flux. It still needs an empty lane: no room, no creature.

Either way:

- "When materialized" effects trigger.
- **Creatures can't attack the turn they arrive.** A creature or fusion that was materialized, fused or brought back this turn waits until your next turn to attack. It still hits back when it's attacked, except a fusion, which arrives winded (section 14). Taking control of a creature (Space Squid) isn't arriving, so that creature can attack, and neither is moving to another lane (Boss's Orders).
- A creature stays in its lane. It only moves if a card says it may.

11. Spells and chains

Spells cost no flux. Every spell is played into an empty spell zone (you have 3); a Field Spell goes in your Field Spell zone.

Symbol	Type	When you can play it	What it affects	Where it goes after
No symbol	Spell	Your Main Phases only. Never in response.	What its text says	Resolves, then your Waste Repository
	Instant Spell	Your Main Phases, on your opponent's turn, during combat, or in response to any card or effect	What its text says	Resolves, then your Waste Repository
	Continuous Spell	Your Main Phases	You: your side of the field	Stays in its spell zone until something removes it
	Field Spell	Your Main Phases	Everything on the field, both sides	Stays in your Field Spell zone. 1 per player: a new one sends your old one to the Waste Repository

The symbol in a spell's top-right corner shows its type: a lightning bolt for Instant Spells, a circle of arrows for Continuous Spells and a mountain for Field Spells. A normal Spell has no symbol.

Chains. Whenever a card or effect is played or used, the other player may respond with an Instant. Then the first player may respond to that, and so on. When both players pass in a row, everything resolves newest first.

> *Example: you play Spell A. Your opponent responds with Instant B. You respond with Instant C. Both pass. C resolves first, then B, then A.*

Creature effects. "Once per turn: ..." effects are used in your Main Phases unless the card says otherwise. "When...", "Whenever..." and "At the end of..." effects happen whenever they trigger.

Destroying a spell as it's played. Pipebomb can be played in response to a spell (a chain). That spell does nothing and goes to its owner's Waste Repository. It was still played, so it still counts for Spellcount.

12. Health, damage and destruction

Nothing heals on its own: damage stays until a card restores it.

Player health (PHP). You start at 30. Restoring can't take you above 30; gaining can.

Card says	What happens
Restore PHP	Heals you, but never above 30, your starting PHP.
Gain PHP	Adds PHP. Can take you above 30.
Pay PHP	A cost. You can always pay it, even to 0, and then you lose.
Lose PHP	Any drop in PHP: damage, paying, or "lose X PHP". Beelzechud and Beelzechad care about this.

Creature health. HP is written current/max: a 3/5 creature has 3 HP left out of 5.

Card says	What happens	1/3 creature, 3 HP
Restore X HP	Heals current HP, never above max; Radiance turns the extra into a bonus (section 15). Max doesn't change.	becomes 3/3
Give X HP, or "+X HP"	Permanent. Raises current and max HP.	becomes 4/6
Permanently lose X HP	Lowers current and max HP. At 0 the creature is destroyed.	becomes 0/0, destroyed
Damage	Lowers current HP. It stays.	becomes 0/3, destroyed

Destroyed. A creature at 0 HP or less is destroyed and goes to its owner's Waste Repository. "Destroyed", "dies" and "killed" all mean the same. Sacrificing a creature destroys it as a cost.

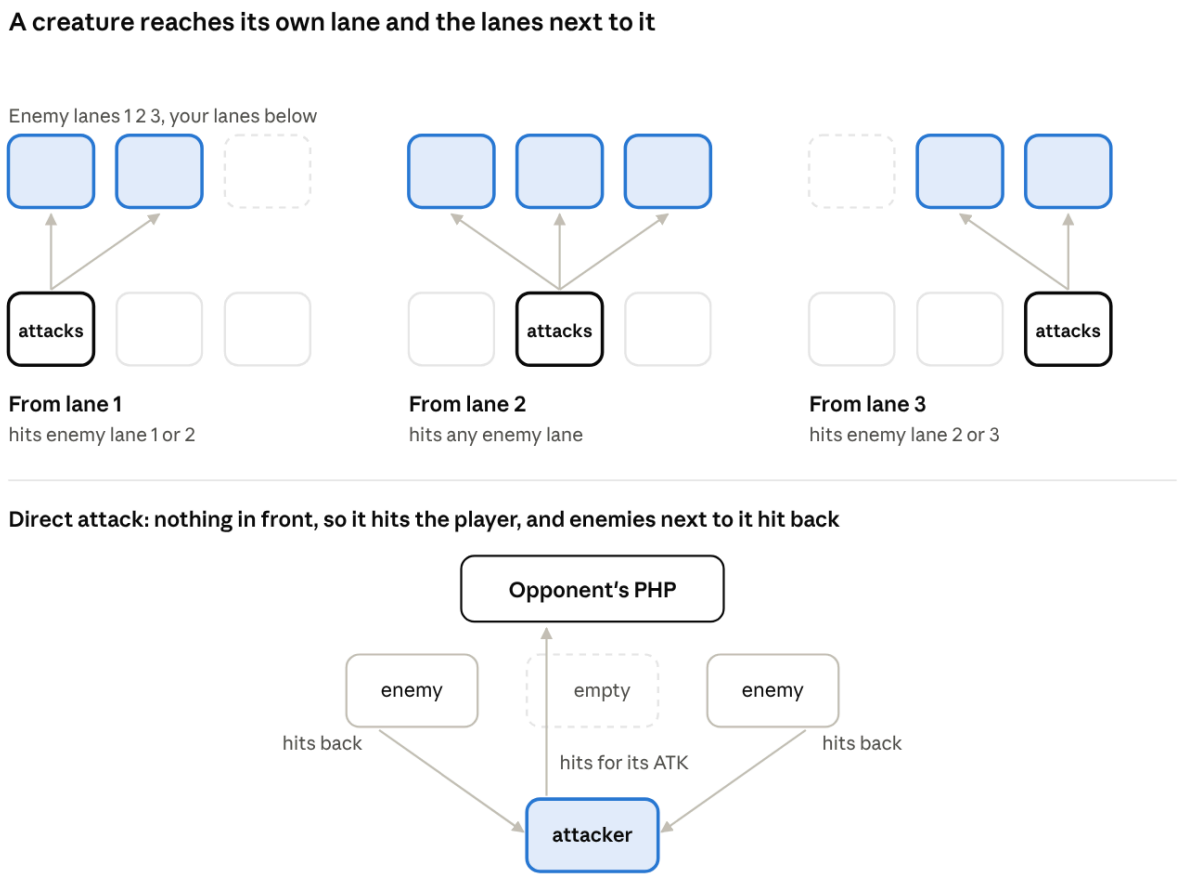

Banished. The card goes to Oblivion. It isn't destroyed, so death effects don't trigger, and it never comes back unless a card says so.

Death effects trigger after the card reaches the Waste Repository. If several die at once, the player whose turn it is resolves theirs first, in the order they choose.

Prevent and reduce. Prevent stops damage, reduce lowers it. Damage reduced to 0 counts as no damage dealt, so nothing that triggers on taking damage fires.

13. Combat

The attacker picks the target and gets +1 Speed, and speed decides who hits first. There's no blocking, but attacking leaves a creature winded (below).

Who can hit what: 3 lanes

Attacking, step by step.

1. In your Battle Phase, pick one of your creatures. Each creature can attack once per turn, one attack at a time.
2. **Choose its target:** the enemy creature in front of it, or in a lane next to it. The middle lane reaches all three enemy lanes.
3. **Or attack the player.** Only if nothing is in front of it. Enemy creatures in the lanes next to it hit it back with their ATK. Winded ones still hit back too, but always last.
4. **Response window.** The defending player, then the attacking player, may play Instants. "When this creature attacks" effects trigger now, when the attack is declared.
5. Resolve the fight using speed (below). The damage stays (section 12).

Nobody attacks on the first turn of the game. Creatures can't attack the turn they're played, and fusions can't attack the turn they're made. They still hit back when attacked.

Winded. A creature that attacks is winded until the start of your next turn, and so is a fusion the turn it's made (section 14). **Turn a winded creature sideways** to show it, and stand it back up at the start of your next turn. A winded creature can't hit back when it's attacked. It still stands in its lane, so an enemy in front of it still can't attack you directly, and its effects still work. Attacking is a choice: the creature that hits now can't defend itself on your opponent's turn.

Winded on a direct attack. When an enemy attacks you directly from a lane next to a winded creature of yours, the winded creature still hits it back, but always last: after the attacker has hit you and after your other creatures have hit back, whatever its speed.

Speed

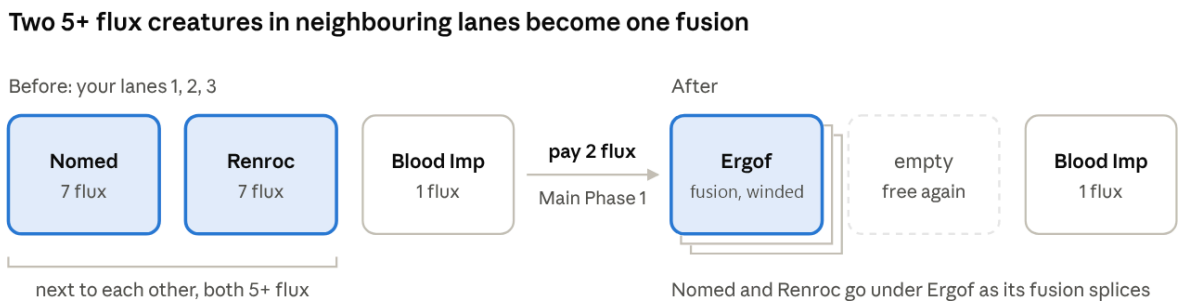

Speed runs from 1 to 8; 4 is normal.

- **Attacker's advantage:** the attacking creature gets +1 Speed for its attack.
- The faster creature deals its damage first.
- On a tie (after the +1), **flip a coin** to see who goes first.
- If the first hit destroys the other creature, it doesn't hit back.
- **Direct attacks:** enemies next to the attacker that are faster than it (counting its +1) hit it before it reaches the player. If they destroy it, the player takes nothing. Slower ones hit it after, tied ones flip a coin, and winded ones hit it last.
- **Twisted Dimensions** (Field Spell, both players) reverses all of this: the slower creature strikes first, and the attacker gets -1 Speed instead of +1. Ties are still a coin flip.
- Creatures with dice ATK roll for each attack and each hit back (section 15).

Fight	Speed	Result
Judicator Angel (4 ATK, 10 HP, Speed 7) attacks Carrion The Dark Duchess (3 ATK, 10 HP, Speed 3)	Judicator 7 + 1 = 8 vs Duchess 3: Judicator first	Duchess drops to 6/10 and hits back for 3. Judicator ends at 7/10.
Vein Ripper (4 ATK, 4 HP, Speed 6) attacks Cherub (1 ATK, 2 HP, Speed 6)	Vein Ripper 6 + 1 = 7 vs Cherub 6: Vein Ripper first	Cherub is destroyed and never hits back. Vein Ripper stays at 4/4.
Vein Ripper (4 ATK, 4 HP, Speed 6) attacks Blood Imp (1 ATK, 2 HP, Speed 7)	Vein Ripper 6 + 1 = 7 vs Blood Imp 7: a tie, so flip a coin	Heads: Vein Ripper hits first and the Imp never hits back (4/4). Tails: the Imp hits first for 1, then dies (Vein Ripper 3/4). Its death effect deals 2 either way.
Judicator Angel attacks the player. In the lanes next to it: Beelzechud (5 ATK, Speed 5) and Blood Imp (1 ATK, Speed 7)	Judicator 7 + 1 = 8 vs 5 and 7: Judicator first	The player takes 4. Then Judicator takes 5 + 1 and ends at 4/10.

14. Fusion

Fusions are the end goal: every fusion is built to be stronger than any creature you can materialize, and it frees up a lane.

Fusing Ergof: before and after

How to fuse.

1. Once per turn, in Main Phase 1, pay **2 flux**.
2. Choose 2 creatures you control in **lanes next to each other**, both with a **printed cost of 5 or more flux** (a gold flux badge). **Fusions count as 5+ flux**, so you can fuse two fusions too.
3. They must meet the recipe of a fusion in your Fusion Deck.
4. Put both under the fusion card. They're its **fusion splices** now, not creatures.
5. Put the fusion in either of their lanes. The other lane is free again.

Not allowed: two creatures in lanes 1 and 3 (they aren't next to each other), a fusion splice that costs less than 5 flux (unless Ritual Pit or Melting Pot says so), or a second fusion in the same turn.

The fusion keeps the damage. The fusion arrives at its own printed stats, minus all the damage its fusion splices had. If that damage is its HP or more, it's destroyed straight away.

> *Example: you fuse a creature at 4/5 HP (1 damage) and one at 5/10 HP (5 damage). The fusion normally has 26 HP, so it arrives at 20/26.*

The fusion is winded. It has just arrived, so it can't attack until your next turn, and it's winded until then too: it can't hit back when it's attacked (section 13).

Ways around the 2 flux.

Card	Type	What it does
It's Free Fuse-Estate	Spell	Fuse without paying the 2 flux
Crimson Altar	Field Spell	Sacrifice another Unholy creature instead of paying the 2 flux

Cheaper fusion splices.

Card	Type	What it does
Ritual Pit	Continuous Spell	Once per turn, banish an Unholy creature from your Waste Repository: your next fusion this turn may use an Unholy creature costing 3 or 4 flux as one of its fusion splices
Melting Pot	Field Spell	Any creature that meets a recipe can be a fusion splice, whatever it costs. Works for both players

Fusing from your hand. Shotgun Wedding (Spell) fuses a creature you control with a creature card from your hand. Everything else works as normal: the recipe, the 5+ flux rule, the 2 flux and one fusion per turn. The fusion takes your creature's lane, and the card from your hand never enters the field.

Reading a recipe.

Recipe says	You need
{Nomed The Dark Viscount + Renroc The Dark Marquis}	Those exact two cards
{Chapel Guard + any Holy creature}	Chapel Guard, plus any creature with the Holy attribute
{any 2 Greedy creatures}	Any two creatures with the Greedy attribute

A creature with two matching attributes can fill either part: Hemogoblin is both Greedy and Unholy. Fusions have attributes too, so a fusion can fill an attribute part.

Fusion splices. Every fusion does something with the cards under it. Some effects count them ("for each fusion splice under this creature"); others let you **banish a fusion splice** for an effect. Banished

splices go to their owner's Oblivion.

- **Every card in the stack counts.** A normal fusion has 2 fusion splices. Fuse two fusions that each have 2, and the new fusion has 6: the two fusions and their 4 splices.
- **Banish from the bottom.** You can only banish a card that has nothing under it. A fusion in the stack can only be banished once all its own splices are gone.

What carries over. Only damage. A fusion only has the effect printed on its own card. Its fusion splices' effects and stat changes don't carry over.

When a fusion leaves the field. If it's destroyed, the fusion card and every card under it go to their owners' Waste Repositories. Only the fusion's own death effects trigger; its fusion splices' death effects don't. If it leaves any other way (banished, say), the fusion card goes where the effect says and the cards under it still go to the Waste Repository.

Unfuse. The fusion goes back to its owner's Fusion Deck. The cards directly under it come back onto the field at full HP, on their owner's side: one in the fusion's lane, the rest in empty lanes (with no empty lane, a card goes to the Waste Repository). A fusion splice that is itself a fusion comes back as that fusion, with its own splices still under it.

- **The damage is split.** The fusion's damage is shared evenly between its fusion splices, half each for the usual two (the bigger one takes an odd point). A banished splice's half is simply gone.
- **It never kills.** Unfusing never takes a splice below 1 HP.
- **Winded stays winded.** If the fusion was winded, the splices come back winded.

> *Example: a fusion at 10/20 was made from a 10 HP and a 7 HP creature. Unfused, each takes 5: they come back at 5/10 and 2/7. Even a fusion at 2/30 only leaves them at 1/10 and 1/7.*

Mixing decks. Most recipes ask for an attribute rather than a specific card, so creatures from different decks can fuse together.

15. Keywords

Some cards carry a keyword that bends the rules.

Radiance

A creature with Radiance never wastes healing. When HP restored to it would go past its max HP, the extra becomes your choice of, until your next turn:

- that much **+ATK**, or
- that much **+HP** over its max (overhealth).

Its max HP doesn't change, and the bonus goes away at the start of your next turn.

> *Example: Acolyte Adam restores 2 HP to a Cherub at full HP (2/2). Cherub has Radiance, so you choose: +2 ATK, or 2 extra HP (4/2), until your next turn.*

So +ATK helps it hit harder this turn, and +HP helps it survive your opponent's turn.

Blood Price

Some creatures say **Pay 3 PHP per flux: Reduce this creature's flux cost by up to Y.** When you materialize one from your hand, you can take any amount off its flux cost, up to Y, and pay 3 PHP for each flux you take off. A creature that can only drop 1 flux just says "Pay 3 PHP: Reduce this creature's flux cost by 1." Paying PHP is what lets you play them early.

> *Example: Vein Ripper costs 3 flux and says "Pay 3 PHP per flux: Reduce this creature's flux cost by up to 2." You can play it for 3 flux, for 2 flux and 3 PHP, or for 1 flux and 6 PHP.*

The printed cost still counts for fusing: a creature printed at 5+ flux can fuse even if you paid less (section 14).

Dice ATK and Gold

Dice ATK. A creature's ATK can be a roll, like 1+d6. Roll it every time it attacks, for that attack only, and again whenever it hits back in a fight. "Natural 20" or "natural 1" means the die itself showed that number.

Gold. Everyone starts with 0 Gold and there's no cap. Only cards that mention Gold can make, spend or move it. Invested Gold is locked into that card: you can't take it back, and it's lost if the card leaves the field.

Fluffy (Plushies)

Plushies are plush versions of other creatures. They keep the original's attributes and add **Fluffy**, so a Plush Judicator Angel still counts as a Holy creature for recipes.

- **They need a Claw Machine.** You can only materialize a Fluffy creature, from your hand or by an effect, while you control a Claw Machine (Field Spell).
- **Losing the machine.** If you stop controlling a Claw Machine, the plushies already on the field stay. You just can't materialize more until you control one again.
- **What the Claw Machine does:** only that. It lets you materialize Fluffy creatures. **Plush Cherub** draws you a card whenever another of your Fluffy creatures dies.
- **Finding the machine.** Arcade Kid and Plush Collector aren't Fluffy, so they work without a Claw Machine; they search your deck for one. Plush Catalogue searches for any card with "Plush" in its name.

> *Example: a Pipebomb destroys your Claw Machine. Your Plush Vein Ripper stays on the field, but the Plush Judicator Angel in your hand has to wait until you find another Claw Machine (Arcade Kid and Plush Collector can search for one).*

Fossil and Stampede (Dinos)

Dinos strolled out of the past, and they keep coming back. Their deck fills its Waste Repository on purpose and digs its creatures back up.

- **Fossil X:** you may materialize this creature from your Waste Repository by banishing X other cards from your Waste Repository instead of paying its flux. Do it in Main Phase 1, into an empty lane, like playing it from your hand: "when materialized" effects trigger and it can't attack this turn.
- **The fuel runs out.** The banished cards go to Oblivion, so every Fossil uses up cards the next one could have used. You can't pay Blood Price on top of Fossil.

- **Milling:** "put the top cards of your deck into your Waste Repository" (Compsognathus, Archaeologist, Primordial Soup) is how Dinos fill up. Watch your deck: drawing from an empty one costs 5 PHP.
- **When materialized from your Waste Repository** (Pteranodon, T-Rex) counts every way back: Fossil, Archaeologist, TT-rex and Microwave.
- **Stampede:** when this creature destroys a creature in combat, the leftover damage hits your opponent. Leftover means the hit minus the HP the creature had left. It counts on hits back too.

> *Example: T-Rex (7 ATK) attacks a Cherub with 2 HP left. The Cherub is destroyed and the other 5 damage hits your opponent. If the Cherub had survived somehow (Chapel Guard, Seraphim Wall), nothing would carry over.*

Complaints (Mundane)

Gregg and the neighbourhood don't win fights. They file Complaints until your creatures are useless or you're broke from fines.

- **Complaint:** put a coin or die on the creature. Each Complaint gives it **-2 ATK**, and while it has any, its **"once per turn" effects don't work**. Complaints stack.
- **Fines:** in your Main Phase you may pay **3 flux** to remove one Complaint from a creature you control, as often as you can pay. HOA President makes fines cost 1 more.
- **Mall Cop Gary:** enemy creatures with a Complaint can't attack. **Neighborhood Watch** stays in its spell zone for your opponent's next 2 turns.
- **Purrramid** {Cat + Cat} can be made from creatures of any flux cost.

> *Example: Nosy Neighbor arrives and puts a Complaint on your Goblin General and your Gob-omber. The General has -2 ATK and can't use its once-per-turn heal. On your turn you pay 3 flux to clear the General, and you have 3 less flux for new creatures.*

Descend (Angels)

Angels fall from the sky in the middle of a fight.

- **Descend:** when an enemy creature attacks, you may materialize this creature from your hand by paying its flux cost. Put it in any empty lane: the attacker fights it instead, whether it was attacking one of your creatures or you.
- **Pay with leftover flux.** Your flux isn't refilled until your Reactor Phase, so whatever you didn't spend on your turn is there on your opponent's turn. Holding flux back is a threat.
- It counts as materializing ("when materialized" effects trigger), it isn't winded, and since it arrived on your opponent's turn it can attack on yours. "When this creature Descends" effects happen before the fight.
- Bellkeeper Monk and Sanctuary Bells each make your Descends cost 1 less flux. Fusions can't Descend.

> *Example: you end your turn with 7 flux left. Your opponent's T-Rex attacks you directly. You Descend a Judicator Angel (7 flux): the T-Rex gets -3 ATK and fights the Judicator instead of hitting you.*

Spellcount (Wizards)

Spells are free, so Wizards play lots of them and count every one.

- **Spellcount:** the number of spells you've played this turn, counting the one being played. Instants on your opponent's turn count on that turn. Track it with a die; it goes back to 0 at the end of every turn.
- "Spellcount 3+" means 3 or more as the card resolves. A negated spell still counts. Abracadabra and Extra Credit can only be played at Spellcount 3+: they have to be at least your 3rd spell this turn.
- **One-shot spell:** a Spell or an Instant Spell. The Archmage makes the first one each turn resolve twice (without paying its costs again). Déjà Vu plays one from your Waste Repository, then banishes it.
- **Polymorph:** the creature is a Frog with 1 ATK and no effects until the end of your next turn. Its HP doesn't change. When it turns back it has the HP it had before Polymorph, so damage it took as a Frog is gone.
- **Abracadabra** (Spellcount 3+ only): the creature goes back to its owner's hand as a new card. Its damage and Complaints are gone, and it has to be materialized (and paid for) again.
- **Card Trick:** look at your opponent's whole hand and pick one card. Below Spellcount 3 they shuffle it into their deck; at Spellcount 3+ it goes to their Waste Repository.
- **Spelling Mistake:** swap the ATK and HP the creature has right now. The old ATK becomes its HP and max HP. A creature with 0 ATK is destroyed.
- **Extra Credit** (Spellcount 3+ only): the creature can attack a second time in the same Battle Phase. It's winded after the first attack, as normal.
- **Wizard Tower:** banish a fusion splice from under it to return a one-shot spell from your Waste Repository to your hand. It isn't once per turn: you can do it once for each splice.

> *Example: you play Polymorph (Spellcount 1) on their Goblin General, Card Trick (2: their best card goes back into their deck) and Abracadabra (3: you can play it now, and their biggest creature goes back to their hand). Spell Slinger dealt 1 damage to your opponent each time.*

16. Advanced rules

The stuff you'll end up arguing about at 1am.

Forgotten effects. A forgotten optional effect ("may", or anything that helps you) is gone. A forgotten mandatory one is resolved if someone notices it the same turn; after that, let it go. Your opponent doesn't have to remind you, but being decent about it is encouraged.

Reading card text.

Card says	Means
"At the start / end of your turn"	Your own turn only
"Each turn", "every turn"	Both players' turns
"Until end of turn", "this turn"	Wears off at the end of the current End Phase
"Any creature", "a creature on the field"	Either side
"You control", "your field"	Your side only
"Enemy creature"	A creature your opponent controls

Card says	Means
"Half of..."	Round down

Negate. A negated creature has no card text until the negation ends. Its stats, name and attributes stay, and anything it already did stays done.

Owner and controller. The owner is the player whose deck a card started in; the controller is whoever has it on their side now. A card going to a hand, deck, Waste Repository or Oblivion always goes to its owner's.

Hand limit. 8 cards, checked at the end of every turn. Discard the extra into your Waste Repository.

Searching your deck. Shuffle afterwards and offer your opponent the cut.

Once per turn / once per game. Counted per effect: 3 copies of the same card still get one use.

Targeting. An effect targets when it chooses a specific card. Attacking isn't targeting, so an untargetable creature can still be attacked.

Simultaneous effects. The player whose turn it is resolves theirs first, in the order they choose, then the other player.

Coin flips. Each player flips their own coin. No coin, no flips.

17. Quick reference

Starting PHP	30. Restoring can't take you above 30; gaining can
Main Deck / Fusion Deck	30 / up to 10, max 3 copies of a card
Opening hand	5. One free redraw if it has 0 or 1 creatures; mulligan only if both players agree
Arriving	Creatures and fusions can't attack the turn they arrive
Draw per turn	1 (the first player skips their first)
Flux	starts at 3, +1 a turn, max 10. Going second: +1 on your first turn
Reactor Phase	+1 max flux and refill. You may also Feed (a card to Oblivion: +1 flux this turn) or Skip (no +1, draw 1 extra card)
Lanes / spell zones / Field Spells	3 / 3 / 1 per player
Attacks	each creature once per turn, own lane or the lanes next to it
Speed	1-8, 4 is normal. The attacker gets +1, faster strikes first, a tie is a coin flip
Winded	A creature that attacked, or a fusion just made, can't hit back when attacked until your next turn. On a direct attack it still hits back, last
Fusing	once per turn, 2 flux, two 5+ flux creatures (gold badge) or fusions in neighbouring lanes. The fusion keeps their damage and is winded
Unfuse	the splices come back at full HP, split the fusion's damage (never below 1 HP) and stay winded if it was
Empty deck	lose 5 PHP for each draw you can't make
Hand limit	8
Gold	starts at 0, no cap

18. Glossary

Term	Meaning
Attribute	A tag like Holy, Unholy, Noble or Greedy. Does nothing on its own; matters when a card or recipe names it
Banish	Send a card to Oblivion. Not destroyed, so no death effects
Banish a fusion splice	Send one card from under a fusion to its owner's Oblivion. Only a card with nothing under it (section 14)
Blood Price	A creature that lets you pay 3 PHP per flux to lower its flux cost (section 15)
Chain	A stack of responses, resolved newest first (section 11)
Continuous Spell	Stays in play and affects you (section 11)
Destroyed	At 0 HP or less, or destroyed by an effect. Goes to the Waste Repository. Same as dies or killed
Feed the reactor	In your Reactor Phase, send a card from your hand to Oblivion for +1 flux this turn (section 8)
Field Spell	Stays in play and affects everything on the field. 1 per player (section 11)
Fluffy	A plushy. Can only be materialized while you control a Claw Machine (section 15)
Flux	What you spend to materialize and fuse creatures (section 8)
Fusion	A creature made from 2 fusion splices, kept in your Fusion Deck until fused (section 14)
Fusion splice	A card under a fusion: the 2 cards it was made from, and everything under them (section 14)
Gain PHP	Add PHP. Can take you above 30
Give HP	Permanently raise current and max HP
Gold	A resource some cards make and spend (section 15)
In front of	The enemy creature in the same lane, directly across
Lane	One of your 3 creature spots. Lane 2 is the middle
Lanes next to it	The lane(s) directly left and right. The middle lane has two, the outer lanes have one
Lose PHP	Any drop in PHP: damage, paying, or "lose X PHP"
Materialize	Put a creature onto the field, from your hand or by an effect (section 10)
Negate	Switch off a creature's card text (section 16)
Oblivion	Where banished cards and cards fed to the reactor go. They don't come back
PHP	Player Health Points. You start with 30
Radiance	A creature with Radiance turns healing past its max HP into +ATK or +HP until your next turn, your choice (section 15)
Restore HP	Heal up to max HP; max doesn't change
Restore PHP	Heal PHP, never above 30
Sacrifice	Destroy your own creature as a cost
Skip	In your Reactor Phase, don't raise your max flux and draw 1 extra card instead (section 8)

Term	Meaning
Speed	Decides who strikes first in a fight, 1 to 8. Attackers get +1; a tie is a coin flip (section 13)
Target	When an effect chooses a specific card. Attacking isn't targeting
Waste Repository	Your face-up discard pile
Winded	Turn it sideways. A creature that attacked, or a fusion just made. Until its controller's next turn it can't hit back when attacked; on a direct attack it hits back last (section 13)

19. Rulings

Answers to questions that come up in play.

Rules

- **Feed:** any card from your hand can feed the reactor. It goes face up to Oblivion. Feeding (or Overclock) can take you above 10 flux for that turn; max flux never goes above 10.
- **Skip:** you still make your normal draw. At 10 max flux, skipping costs you nothing.
- **Winded** ends at the start of its controller's next turn. A winded creature still blocks its lane and its effects still work.
- **Arriving:** a creature brought back by an effect (Lord Lazarus, Microwave, Carrion The Dark Duchess, Unfuse) has arrived, so it can't attack that turn. Moving to another lane (Boss's Orders) isn't arriving.
- **Fusing a fusion:** two fusions in lanes next to each other can be fused if they meet a recipe, just like two creatures. A fusion can even fuse into another copy of itself from your Fusion Deck, which grows its stack.
- **Damage that carries over** is the damage the splices had when you fused. Overhealth from Radiance doesn't count as extra HP for this.

Cards

- **Space Squid:** pay PHP equal to the creature's printed flux cost (10 for a fusion). It moves to an empty lane on your side, isn't winded any more and can attack this turn. At the start of your next turn it goes back to its old lane, or another empty one; with no empty lane it goes to its owner's Waste Repository. If you sacrifice it or use it as a fusion splice, it doesn't come back. With no empty lane on your side, you can't play Space Squid at all.
- **Microwave:** takes creatures, not fusions, from either player's Waste Repository. "When materialized" effects trigger.
- **Unfuse:** see section 14. The splices don't count as materialized, so "when materialized" effects don't trigger.
- **Lord Lazarus:** comes back once for each fusion splice you can banish from under it, each time at half its printed stats (4 ATK / 11 HP / 2 Speed) and with its remaining splices still under it.
- **Seraphim Wall:** can save itself too. Each save costs one fusion splice.
- **Scrooger:** only takes creatures you controlled that went to a Waste Repository, not fusions or banished cards. A creature that Lord Lazarus is bringing back can't be taken.
- **Hop Goblin:** with Goblin King or Goblin General out it still rolls at least twice; it uses whichever gives more rolls.

- **Beelzechad:** banishing a splice instead of losing 2 PHP is your choice each turn.
- **Melting Pot, Twisted Dimensions:** Field Spells affect both players, so your opponent can fuse cheap creatures with your Melting Pot too.
- **Boss's Orders:** can move your creature or an enemy one, always to an empty lane on its own side.
- **Shotgun Wedding:** the creature from your hand counts as a fusion splice but never entered the field, so its "when materialized" effects don't trigger and it carries no damage.
- **Blood Ledger** is a Continuous Spell now, so it takes one of your 3 spell zones instead of your Field Spell zone.
- **Claw Machine:** it only lets its owner materialize plushies. Pipebomb destroys a Claw Machine right away: no new plushies, but the ones already on the field stay.
- **Space Squid on a plushy:** it changes sides until it goes back. You need a Claw Machine to materialize a plushy, not to keep one.
- **Mega Plush:** protects only your own Claw Machine, one fusion splice per save.
- **Patchwork Plush:** counts every Fluffy creature and Fluffy fusion in your Waste Repository.
- **Plush Catalogue** can find another Plush Catalogue, but never the Claw Machine itself (it has no "Plush" in its name). Plush Collector can.
- **Beelzechad:** only creatures it destroys in combat trigger its 2 damage.
- **Goblin Pit Boss:** its reroll is an activated effect, so only on your own turn. It can reroll any Greedy creature's die.
- **Goblin Miner:** once per turn counts per card name, so several Miners still pay for 1 flux per turn.
- **Goblin Stock Broker:** if nobody can look the price up, flip a coin.
- **Market Research:** if your deck has no Greedy creature, the gold is still paid.
- **Loaded Dice:** rerolls one die roll or coin flip, yours or your opponent's.
- **Sanctuary Bells:** heals Holy creatures on both sides (Radiance applies) and makes your Descends cost 1 less flux.
- **Pipebomb:** it destroys a spell as it's played, or a spell that's already in play: a Continuous or Field Spell, or a Neighborhood Watch.
- **Nuclear Waste:** it rolls for one of your creatures at random at the end of your turn. A creature it destroys was destroyed, so its "when destroyed" effects trigger.
- **New fusions:** Chimera, Blood Mage, The Flock, Fossil Fuel Baron and Absolute Unit only ask for attributes, so creatures from different factions can fuse. Chimera can be made from creatures of any flux cost. Absolute Unit needs two fusions next to each other, and every card in both stacks becomes its fusion splice. Fossil Fuel Baron gains 1 gold for every card banished from your Waste Repository, including Fossil costs.
- **Descend and Divine Shelter:** you can Descend first and then Shelter the creature that descended.
- **Gabe:** "6 HP or less" is the attacker's current HP. If Gabe destroys it, the attack is over.
- **Tax Evasion:** prevents up to 5 combat damage in total during that fight, then the attacker gets a Complaint.
- **Gregg's Vape:** the Complaint goes on at the end of your turn, after the +4 ATK attack.
- **The bodega:** discarding is optional. Only a discarded Ordinary creature gives a Complaint.
- **Battlemage and Spellsword:** count every spell you've played this turn, including ones played before they arrived.
- **Polymorph on a creature with Complaints:** a Frog has exactly 1 ATK, so Complaints don't lower it. They're still there when it turns back.

- **Spelling Mistake and Complaints:** the swap uses the ATK after Complaints. The Complaints stay and keep giving -2 ATK each after the swap.
- **Abracadabra on a creature you took with Space Squid:** it goes back to its owner's hand, not yours.
- **Seraphim Wall and Sanctified Knight stack:** a creature next to both takes 2 less combat damage.
- **Mountain Orc:** natural 20 and natural 1 only count on its own attacks, not when it hits back.
- **Renroc, Ergof:** "4 (or 6) or less HP" means current HP. Chapel Guard survives the first destroy effect too.
- **Blood Imp:** if your opponent controls a creature, you must pick a creature.
