Fusion Fuckery Rulebook v3

Reality is ~~FUCKED~~ fractured.

A massive multiversal collapse kicked off by a bunch of Reactor Meltdowns turned reality into total chaos. Angels and Blood Demons are real now. Goblins are stealing my fucking gold and some fuck ass dinosaurs strolled out of the past, and for some reason Gregg and his extended family are here too... What the fuck, Gregg?

1. The Golden Rules

When anything in this book seems to clash, these three settle it.

1. **The card wins.** If a card's text contradicts this rulebook, do what the card says.
2. **Your cards, your job.** You remember and trigger your own cards' effects (section 16).
3. **Newest first.** When effects pile up, the last one played resolves first (section 11).

2. How to win

Each player starts with **30 PHP** (Player Health Points). Get your opponent to **0 PHP** and you win.

Your PHP drops when:

- an enemy creature hits you directly (section 13)
- a card effect deals you damage or makes you lose PHP
- you pay PHP for your own cards. You can pay yourself to 0, and then you lose. Count carefully.
- you can't draw. Running out of cards doesn't knock you out: each time you'd draw from an empty deck, you lose 5 PHP instead.

If both players hit 0 PHP at the same time, the game is a draw.

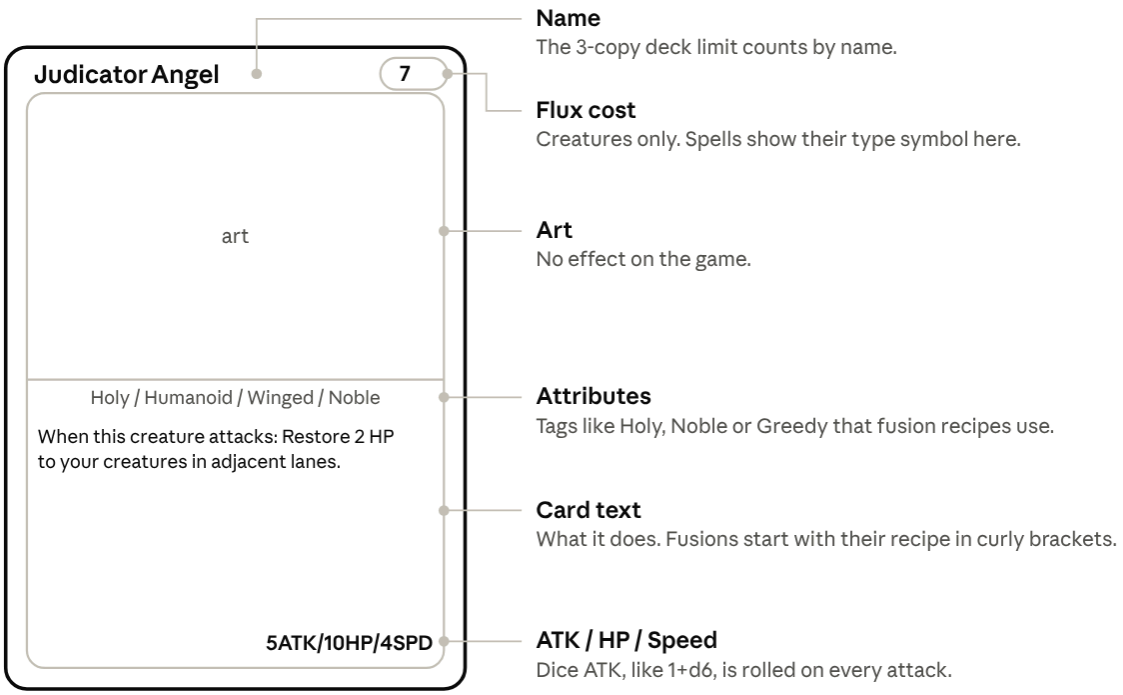

3. What you need

- A **Main Deck** of exactly 30 cards and a **Fusion Deck** of up to 10 fusions.
- **Dice.** Dice ATK uses a d2 (a coin works), d4, d6, d8, d10, d12 and d20. Spare dice help track damage.
- **Your own coin** for coin flips.
- Something both players can see to track **PHP**, **Gold** and damage on creatures: dice, paper or a phone.

4. Reading a card

Every card is a tiny contract with reality. The frame colour tells you what it is, so cards don't print their type.

Everything you need is printed on the card

Frame colour shows the type: orange = creature, cyan = fusion, purple = spell

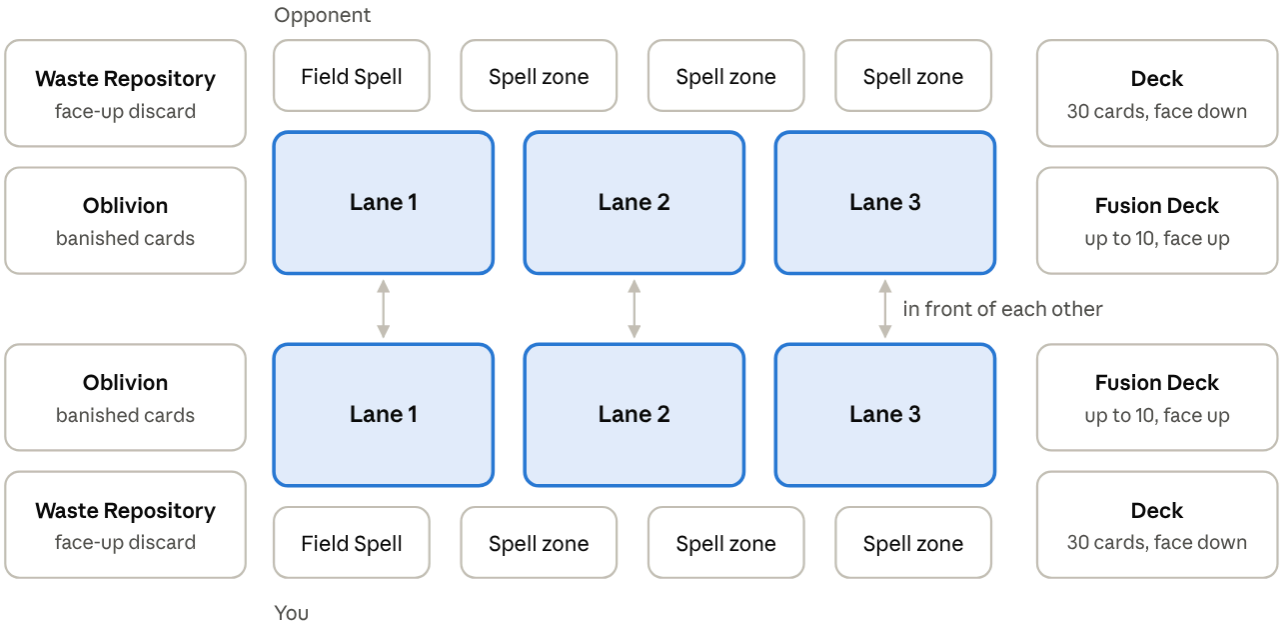

a creature card · 6 parts

- **Creatures** (orange) show their flux cost in the DNA badge, top right.
- **Fusions** (cyan) have no flux cost. They come from your Fusion Deck, and their text starts with the recipe in curly brackets, like {Chapel Guard + any Holy creature}.
- **Spells** (purple) have no stats. The symbol top right shows the spell type (section 11).

5. The play area

Your side mirrors your opponent's, and your 3 lanes line up with theirs.

Each side has 3 lanes facing each other, 3 spell zones and 1 Field Spell

the table · both sides

Zone	What it is
Lanes (3)	Your creature zone. One creature or fusion per lane, so max 3.
Spell zones (3)	Every Spell and Instant is played into an empty spell zone, then leaves when it resolves. Continuous Spells stay. All 3 full = no more spells until one clears.
Field Spell zone (1)	Your Field Spell. 1 per player.
Deck	Your 30-card Main Deck, face down.
Fusion Deck	Your fusions, face up. Anyone can look through it.
Waste Repository	Your face-up discard pile. Used, destroyed and discarded cards go here.
Oblivion	Face up. Banished cards go here and never come back unless a card says so.

Hidden and public. Your hand and your deck are hidden; everything else is public. Hand size is public too: if your opponent asks how many cards you hold, tell them. Ask before touching the other player's cards.

Where things are.

- **In front of:** the enemy creature in the same lane, directly across.
- **Lanes next to it:** the lane or lanes directly left and right. The middle lane has two; the outer lanes have one. Lanes 1 and 3 aren't next to each other.
- **Adjacent** (when a card uses the word): the creature in front of it, plus the creatures in the lanes next to it on its own side. An empty lane counts as nothing.

6. Building a deck

- **Main Deck:** exactly 30 cards (creatures and spells).
- **Fusion Deck:** up to 10 fusions. Fusions only go here and don't count toward the 30.
- **Copies:** max 3 of any card by name, in both decks.
- **Mixing:** any card can go in any deck.

7. Setting up

1. Shuffle your Main Deck and offer it to your opponent to cut.
2. Put your Fusion Deck face up next to your field.
3. Both players start at **30 PHP** and **0 Gold**.
4. Flip a coin. The winner decides who goes first.
5. Each player draws **5 cards**.
6. **Mulligan:** only if **both players agree**. Then both shuffle their hands back into their decks and draw 5 new cards, once.
7. Start the game.

Going first vs second. The first player skips their first draw and nobody attacks on the first turn of the game. The second player gets **+1 flux on their first turn** (4 instead of 3).

8. Flux

Flux is what you spend to materialize and fuse creatures. **Spells are free.**

- You start the game with **3 max flux**.
- In your Reactor Phase, except on your first turn, raise your max flux by 1, then refill it.
- Max flux caps at **10**, on your 8th turn.
- Leftover flux doesn't do much: your next Reactor Phase refills you to your max anyway.
- Turns are counted per player: your 3rd turn is the third turn you've taken, no matter who went first.
- A discount can push a cost **below 0**, and then you gain the difference: a creature that costs −1 flux gives you 1 flux when you play it.

Your turn	1	2	3	4	5	6	7	8+
Max flux	3 (4 if second)	4	5	6	7	8	9	10

9. Turn structure

Seven phases, in this order, every turn. Say each one out loud as you go.

#	Phase	What happens
1	Draw	Draw **1** card. The first player skips this on their first turn.
2	Reactor	Max flux +1 (not on your first turn), then refill your flux.
3	Start	Resolve start-of-turn effects.
4	Main 1	In any order: materialize creatures, play spells, use effects. **One fusion** (section 14).
5	Battle	Attack (section 13). Nobody attacks on the first turn of the game.
6	Main 2	Play spells and use effects. No materializing from your hand and no fusing.
7	End	End-of-turn effects, then Radiance wears off (section 15), then discard down to 8 cards.

10. Materializing creatures

From your hand (natural materialize). Only in Main Phase 1. Pay the creature's flux cost, then put it in **any empty lane**. You can materialize as many as you can pay for and fit. Some creatures let you pay part of the cost in PHP with **Blood Price** (section 15).

By an effect (Carrion Duchess, The Meat Cathedral and so on). It happens whenever the effect says, even outside Main Phase 1, and you don't pay flux. It still needs an empty lane: no room, no creature.

Either way:

- "When materialized" effects trigger.
- **Creatures can attack the turn they arrive.** There's no summoning sickness.
- A creature stays in its lane. It only moves if a card says it may.

11. Spells and chains

Spells cost no flux. Every spell is played into an empty spell zone (you have 3); a Field Spell goes in your Field Spell zone.

Symbol	Type	When you can play it	What it affects	Where it goes after
	Spell	Your Main Phases only. Never in response.	What its text says	Resolves, then your Waste Repository
	Instant Spell	Your Main Phases, **on your opponent's turn**, **during combat**, or in response to any card or effect	What its text says	Resolves, then your Waste Repository
	Continuous Spell	Your Main Phases	**You**: your side of the field	Stays in its spell zone until something removes it
	Field Spell	Your Main Phases	**Everything on the field**, both sides	Stays in your Field Spell zone. **1 per player**: a new one sends your old one to the Waste Repository

The symbol in a spell's top-right corner shows its type: a lightning bolt for Spells and Instant Spells, a circle of arrows for Continuous Spells and a mountain for Field Spells.

Chains. Whenever a card or effect is played or used, the other player may respond with an Instant. Then the first player may respond to that, and so on. When both players pass in a row, everything resolves **newest first**.

> Example: you play Spell A. Your opponent responds with Instant B. You respond with Instant C. Both pass. C resolves first, then B, then A.

Creature effects. "Once per turn: …" effects are used in your Main Phases unless the card says otherwise. "When…", "Whenever…" and "At the end of…" effects happen whenever they trigger.

12. Health, damage and destruction

Nothing heals on its own: damage stays until a card restores it.

Player health (PHP). You start at 30. Restoring can't take you above 30; gaining can.

Card says	What happens
Restore PHP	Heals you, but never above 30, your starting PHP.
Gain PHP	Adds PHP. Can take you above 30.
Pay PHP	A cost. You can always pay it, even to 0, and then you lose.
Lose PHP	Any drop in PHP: damage, paying, or "lose X PHP". Pain Drinker and Skinless Titan care about this.

Creature health. HP is written current/max: a 3/5 creature has 3 HP left out of 5.

Card says	What happens	1/3 creature, 3 HP
Restore X HP	Heals current HP, never above max (except with Radiance, section 15). Max doesn't change.	becomes 3/3
Give X HP, or "+X HP"	**Permanent.** Raises current and max HP.	becomes 4/6
Permanently lose X HP	Lowers current and max HP. At 0 the creature is destroyed.	becomes 0/0, destroyed
Damage	Lowers current HP. It stays.	becomes 0/3, destroyed

Destroyed. A creature at 0 HP or less is destroyed and goes to its owner's Waste Repository. "Destroyed", "dies" and "killed" all mean the same. **Sacrificing** a creature destroys it as a cost.

Banished. The card goes to Oblivion. It isn't destroyed, so death effects don't trigger, and it never comes back unless a card says so.

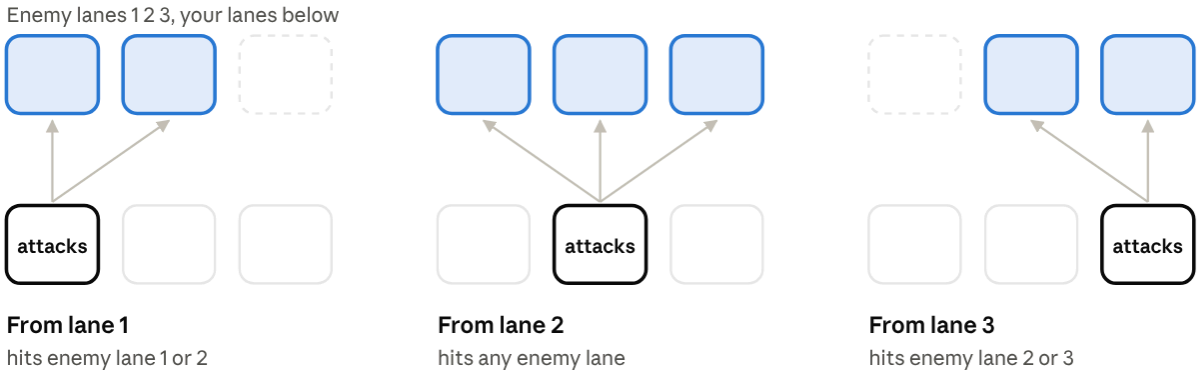

Death effects trigger after the card reaches the Waste Repository. If several die at once, the player whose turn it is resolves theirs first, in the order they choose.

Prevent and reduce. Prevent stops damage, reduce lowers it. Damage reduced to 0 counts as no damage dealt, so nothing that triggers on taking damage fires.

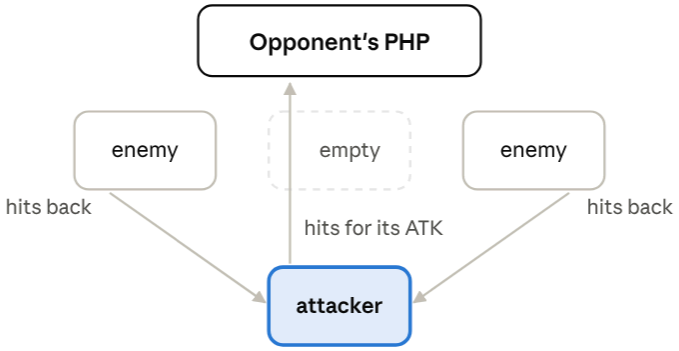

13. Combat

The attacker picks the target and gets +1 Speed, and speed decides who hits first. There's no blocking.

A creature reaches its own lane and the lanes next to it

Direct attack: nothing in front, so it hits the player, and enemies next to it hit back

who can hit what · 3 lanes

Attacking, step by step.

1. In your Battle Phase, pick one of your creatures. Each creature can **attack once per turn**, one attack at a time.
2. **Choose its target:** the enemy creature in front of it, or in a lane next to it. The middle lane reaches all three enemy lanes.
3. **Or attack the player.** Only if nothing is in front of it. Enemy creatures in the lanes next to it hit it back with their ATK.
4. **Response window.** The defending player, then the attacking player, may play Instants. "When this creature attacks" effects trigger now, when the attack is declared.
5. **Resolve the fight** using speed (below). The damage stays (section 12).

Nobody attacks on the first turn of the game. Creatures can attack the turn they're played, and fusions the turn they're made.

Speed

Speed runs from 1 to 4; 2 is normal.

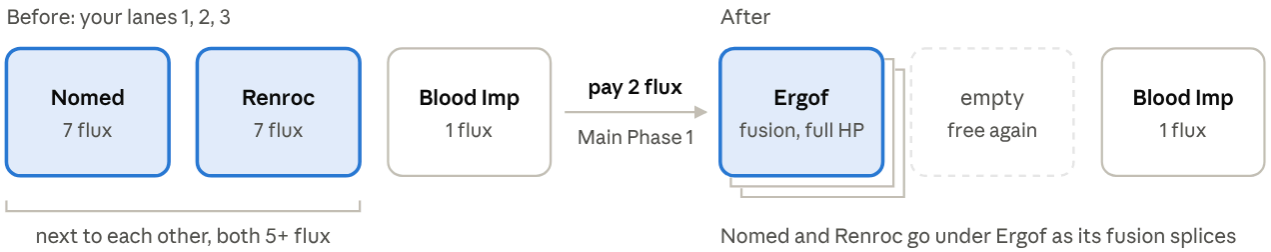

- **Attacker's advantage:** the attacking creature gets **+1 Speed** for its attack.
- The **faster** creature deals its damage first.
- On a **tie** (after the +1), the attacker goes first.
- If the first hit destroys the other creature, it **doesn't hit back**.
- **Direct attacks:** enemies next to the attacker that are faster than it (counting its +1) hit it before it reaches the player. If they destroy it, the player takes nothing. Slower ones hit it after.
- **Creatures with dice ATK roll** for each attack and each hit back (section 15).

Fight	Speed	Result
Judicator Angel (5 ATK, 10 HP, Speed 4) attacks Carrion Duchess (3 ATK, 10 HP, Speed 2)	Judicator 4 + 1 = 5 vs Duchess 2: Judicator first	Duchess drops to 5/10 and hits back for 3. Judicator ends at 7/10.
Vein Ripper (4 ATK, 2 HP, Speed 3) attacks Cherub (1 ATK, 2 HP, Speed 3)	Vein Ripper 3 + 1 = 4 vs Cherub 3: Vein Ripper first	Cherub is destroyed and never hits back. Vein Ripper stays at 2/2.
Carrion Duchess (3 ATK, 10 HP, Speed 2) attacks Vein Ripper (4 ATK, 2 HP, Speed 3)	Duchess 2 + 1 = 3 vs Vein Ripper 3: a tie, so the attacker goes first	Vein Ripper is destroyed before it can hit back. Duchess stays at 10/10.
Judicator Angel attacks the player. In the lanes next to it: Pain Drinker (5 ATK, Speed 3) and Blood Imp (1 ATK, Speed 2)	Judicator 4 + 1 = 5 vs 3 and 2: Judicator first	The player takes 5. Then Judicator takes 5 + 1 and ends at 4/10.

14. Fusion

Fusions are the end goal: every fusion is built to be stronger than any creature you can materialize, and it frees up a lane.

Two 5+ flux creatures in neighbouring lanes become one fusion

Not allowed

Lanes 1 and 3 together: they aren't next to each other
A fusion splice that costs less than 5 flux (Ritual Pit is the one exception)
A second fusion in the same turn

fusing Ergof · before and after

How to fuse.

1. Once per turn, in Main Phase 1, **pay 2 flux**.
2. Choose **2 creatures you control in lanes next to each other**, both with a printed cost of **5 or more flux**.
3. They must meet the recipe of a fusion in your Fusion Deck.
4. Put both under the fusion card. They're its fusion splices now, not creatures.
5. Put the fusion in either of their lanes. The other lane is free again.

The fusion arrives at its own printed stats and full HP, and it **can attack this turn**.

Ways around the 2 flux.

Card	Type	What it does
It's free fuse-estate	Spell	Fuse without paying the 2 flux
Crimson Altar	Field Spell	Sacrifice another Unholy creature instead of paying the 2 flux

Using a cheaper fusion splice. Ritual Pit (Continuous Spell) is the one exception to the 5+ flux rule. Once per turn, banish an Unholy creature from your Waste Repository: your next fusion this turn may use an Unholy creature costing 3 or 4 flux as one of its fusion splices. You still pay the 2 flux to fuse.

Reading a recipe.

Recipe says	You need
{Nomed The Dark Viscount + Renroc The Dark Marquis}	Those exact two cards
{Chapel Guard + any Holy creature}	Chapel Guard, plus any creature with the Holy attribute
{any 2 Greedy creatures}	Any two creatures with the Greedy attribute

A creature with two matching attributes can fill either part: Hemogoblin is both Greedy and Unholy.

What carries over. Nothing. A fusion only has the effect printed on its own card. Its fusion splices' effects, stats, damage and stat changes don't carry over.

When a fusion leaves the field. If it's destroyed, the fusion card and its fusion splices go to your Waste Repository. Only the fusion's own death effects trigger; its fusion splices' death effects don't. If it leaves any other way (banished, say), the fusion card goes where the effect says and its fusion splices still go to your Waste Repository.

Mixing decks. Most recipes ask for an attribute rather than a specific card, so creatures from different decks can fuse together.

15. Keywords

Some cards carry a keyword that bends the rules.

Radiance

When a card with Radiance **restores** HP to a creature, the healing can go past its max HP. For each point over max, **you choose** what it becomes, until end of turn:

- **+1 HP** over max (overhealth), or
- **+1 ATK**

You can split the extra points however you like. Max HP doesn't change, and at the end of the turn the extra HP and ATK both go away.

> Example: Holy Acolyte restores 2 HP to a Chapel Guard at full HP (12/12). You choose: 14/12 HP, or 12/12 HP with +2 ATK, or 13/12 HP with +1 ATK. At the end of the turn it goes back to 12/12 HP.

So healing a creature that's already at full HP is never wasted: it can take a bigger hit this turn, or hit harder.

Blood Price

Blood Price N: when you materialize the creature from your hand, you may pay **2 PHP for each flux you skip**, up to N.

> Example: Nomed The Dark Viscount costs 7 flux and has Blood Price 2. With 5 flux, you can play it by paying 5 flux and 4 PHP.

The printed cost still decides the creature's tier and whether it can fuse (section 14).

Dice ATK and Gold

Dice ATK. A creature's ATK can be a roll, like **1+d6**. Roll it **every time it attacks**, for that attack only, and again whenever it hits back in a fight. "Natural 20" or "natural 1" means the die itself showed that number.

Gold. Everyone starts with **0 Gold** and there's **no cap**. Only cards that mention Gold can make, spend or move it. **Invested** Gold is locked into that card: you can't take it back, and it's lost if the card leaves the field.

16. Advanced rules

The stuff you'll end up arguing about at 1am.

Forgotten effects. A forgotten optional effect ("may", or anything that helps you) is gone. A forgotten mandatory one is resolved if someone notices it the same turn; after that, let it go. Your opponent doesn't have to remind you, but being decent about it is encouraged.

Reading card text.

Card says	Means
"At the start / end of your turn"	Your own turn only
"Each turn", "every turn"	Both players' turns
"Until end of turn", "this turn"	Wears off at the end of the current End Phase
"Any creature", "a creature on the field"	Either side
"You control", "your field"	Your side only
"Enemy creature"	A creature your opponent controls

Card says	Means
"Half of…"	Round down

Negate. A negated creature has no card text until the negation ends. Its stats, name and attributes stay, and anything it already did stays done.

Owner and controller. The owner is the player whose deck a card started in; the controller is whoever has it on their side now. A card going to a hand, deck, Waste Repository or Oblivion always goes to its *owner's*.

Hand limit. 8 cards, checked at the end of every turn. Discard the extra into your Waste Repository.

Searching your deck. Shuffle afterwards and offer your opponent the cut.

Once per turn / once per game. Counted per effect: 3 copies of the same card still get one use.

Targeting. An effect targets when it chooses a specific card. Attacking isn't targeting, so an untargetable creature can still be attacked.

Simultaneous effects. The player whose turn it is resolves theirs first, in the order they choose, then the other player.

Coin flips. Each player flips their own coin. No coin, no flips.

17. Quick reference

Starting PHP	30. Restoring can't take you above 30; gaining can
Main Deck / Fusion Deck	30 / up to 10, max 3 copies of a card
Opening hand	5 (mulligan only if both players agree)
Draw per turn	1 (the first player skips their first)
Flux	starts at 3, +1 a turn, max 10. Going second: +1 on your first turn
Lanes / spell zones / Field Spells	3 / 3 / 1 per player
Attacks	each creature once per turn, own lane or the lanes next to it
Speed	1–4, 2 is normal. The attacker gets +1, faster strikes first, the attacker wins ties

Fusing	once per turn, 2 flux, two 5+ flux creatures in neighbouring lanes
Empty deck	lose 5 PHP for each draw you can't make
Hand limit	8
Gold	starts at 0, no cap

18. Glossary

Term	Meaning
Adjacent	The creature in front of it, plus the creatures in the lanes next to it on its own side
Attribute	A tag like Holy, Unholy, Noble or Greedy. Does nothing on its own; matters when a card or recipe names it
Banish	Send a card to Oblivion. Not destroyed, so no death effects
Blood Price N	Pay 2 PHP for each flux you skip, up to N (section 15)
Chain	A stack of responses, resolved newest first (section 11)
Continuous Spell	Stays in play and affects you (section 11)
Destroyed	At 0 HP or less, or destroyed by an effect. Goes to the Waste Repository. Same as dies or killed
Field Spell	Stays in play and affects everything on the field. 1 per player (section 11)
Flux	What you spend to materialize and fuse creatures (section 8)
Fusion	A creature made from 2 fusion splices, kept in your Fusion Deck until fused (section 14)
Fusion splice	A creature placed under a fusion card to make it
Gain PHP	Add PHP. Can take you above 30
Give HP	Permanently raise current and max HP

Term	Meaning
Gold	A resource some cards make and spend (section 15)
In front of	The enemy creature in the same lane, directly across
Lane	One of your 3 creature spots. Lane 2 is the middle
Lanes next to it	The lane(s) directly left and right. The middle lane has two, the outer lanes have one
Lose PHP	Any drop in PHP: damage, paying, or "lose X PHP"
Materialize	Put a creature onto the field, from your hand or by an effect (section 10)
Negate	Switch off a creature's card text (section 16)
Oblivion	Where banished cards go. They don't come back
PHP	Player Health Points. You start with 30
Radiance	Healing past max HP becomes extra HP or ATK until end of turn, your choice (section 15)
Restore HP	Heal up to max HP; max doesn't change
Restore PHP	Heal PHP, never above 30
Sacrifice	Destroy your own creature as a cost
Speed	Decides who strikes first in a fight, 1 to 4. Attackers get +1 (section 13)
Target	When an effect chooses a specific card. Attacking isn't targeting
Waste Repository	Your face-up discard pile
